

What SUCOFAM is addressing

Across Uganda, millions of smallholder farmers particularly women and youth remain trapped in low-productivity, low-income agricultural systems despite agriculture being the backbone of the economy. While Uganda is a major producer of coffee, cocoa, and honey, the majority of farmers in these value chains operate at subsistence level, earning minimal returns due to weak market integration, limited value addition, and poor access to structured and premium markets.

Women and youth, who constitute the largest share of the agricultural labor force, face systemic barriers including limited access to land, finance, skills, and decision-making platforms. As a result, they remain largely excluded from profitable nodes of the value chain such as processing, branding, and trade. This exclusion perpetuates rural poverty, unemployment, and intergenerational inequality.

At the household level, farming families face multi-dimensional challenges beyond production. Low and unstable incomes translate into poor nutrition, limited access to education, inadequate healthcare, and weak financial resilience. Many households lack access to financial services, climate-resilient technologies, and basic agribusiness skills necessary to transition from subsistence to commercial farming.

Additionally, climate change and environmental degradation are rapidly undermining agricultural productivity. Unpredictable weather patterns, declining soil fertility, and deforestation continue to threaten the sustainability of coffee, cocoa, and honey production systems, further exacerbating vulnerability among smallholder farmers.

Despite the presence of cooperatives and farmer groups, there remains a critical gap in integrated, market-driven, and inclusive support systems that simultaneously address production, value addition, market access, financial inclusion, gender equity, and household well-being. Without such holistic interventions, farmers especially women and youth will remain locked out of meaningful economic participation in Uganda's agricultural transformation.

There is therefore an urgent need for scalable, inclusive, and market-oriented solutions that empower farmers to participate competitively in value chains, strengthen household resilience, and unlock sustainable livelihoods.

ABOUT US

SUCOFAM is a national agricultural development organization committed to transforming farming households across Uganda through farmer empowerment, with a strong emphasis on youth and women groups. Established in June 2024 and headquartered in Kasese, SUCOFAM operates across the country supporting actors in the coffee, cocoa, and honey value chains.

SUCOFAM focuses on building resilient, inclusive, and commercially viable farming communities by promoting sustainable production, value addition, and structured market access. The organization addresses key sector challenges including low household incomes, limited market integration, food insecurity, social inequality, and environmental degradation.

Vision

To build a transformed agricultural sector in Uganda where farmers especially women and youth adopt improved agronomic practices, produce high-quality, market-compliant products, and participate equitably in transparent and profitable value chains free from exploitation.

Mission

To empower farmers through capacity building in good agronomic practices, quality assurance, and post-harvest management, while strengthening access to market information, financial services, and structured markets enabling them to reduce distress sales, overcome middlemen exploitation, and secure fair, sustainable incomes from coffee, cocoa, and honey value chains.

Across Uganda, millions of smallholder farmers particularly women and youth remain trapped in low-productivity, low-income agricultural systems despite agriculture being the backbone of the economy. While Uganda is a major producer of coffee, cocoa, and honey, the majority of farmers in these value chains operate at subsistence level, earning minimal returns due to weak market integration, limited value addition, and poor access to structured and premium markets.

Women and youth, who constitute the largest share of the agricultural labor force, face systemic barriers including limited access to land, finance, skills, and decision-making platforms. As a result, they remain largely excluded from profitable nodes of the value chain such as processing, branding, and trade. This exclusion perpetuates rural poverty, unemployment, and intergenerational inequality.

At the household level, farming families face multi-dimensional challenges beyond production. Low and unstable incomes translate into poor nutrition, limited access to education, inadequate healthcare, and weak financial resilience. Many households lack access to financial services, climate-resilient technologies, and basic agribusiness skills necessary to transition from subsistence to commercial farming.

Additionally, climate change and environmental degradation are rapidly undermining agricultural productivity. Unpredictable weather patterns, declining soil fertility, and deforestation continue to threaten the sustainability of coffee, cocoa, and honey production systems, further exacerbating vulnerability among smallholder farmers.

Despite the presence of cooperatives and farmer groups, there remains a critical gap in integrated, market-driven, and inclusive support systems that simultaneously address production, value addition, market access, financial inclusion, gender equity, and household well-being. Without such holistic interventions, farmers especially women and youth will remain locked out of meaningful economic participation in Uganda's agricultural transformation.

There is therefore an urgent need for scalable, inclusive, and market-oriented solutions that empower farmers to participate competitively in value chains, strengthen household resilience, and unlock sustainable livelihoods.

SUCOFAM Products

As part of its farmer empowerment model, SUCOFAM supports production, aggregation, value addition, and commercialization of branded agricultural products:

- SUCOFAM Coffee; high-quality, traceable coffee produced and processed by organized farmer groups.
- SUCOFAM Cocoa; premium cocoa supporting emerging cocoa farmers and youth enterprises.
- SUCOFAM Honey, natural honey produced through sustainable beekeeping initiatives involving women and youth groups.

These products are already on the market, reflecting SUCOFAM's commitment to linking farmers directly to profitable and sustainable value chains.

Core Programs & Interventions

1. Climate-Smart Agriculture

- Promotion of sustainable farming practices
- Soil fertility improvement and agroforestry
- Climate adaptation and resilience building

2. Farmer Organization & Empowerment

- Formation and strengthening of youth and women farmer groups
- Leadership development and cooperative governance
- Inclusive participation in agricultural value chains

3. Value Addition & Agribusiness Development

- Processing, quality assurance, and product branding
- Enterprise development for youth-led agribusinesses
- Skills training in post-harvest handling and commercialization

4. Market Access & Trade Linkages

- Structured aggregation and bulking systems
- Market connections for coffee, cocoa, and honey
- Promotion and scaling of SUCOFAM-branded products

5. Nutrition & Household Food Security

- Promotion of kitchen gardening
- Nutrition education for improved household diets

6. Climate & Environmental Sustainability

- Afforestation and reforestation initiatives
- Carbon sequestration and land restoration programs

Cross-Cutting Household Empowerment Programs

7. Gender Inclusivity

- Promoting equal participation of women and men in decision-making
- Supporting women leadership in farmer groups and cooperatives
- Addressing gender-based barriers in access to resources and markets

8. Financial Inclusion

- Linking farmers to savings groups, SACCOs, and financial institutions
- Promoting financial literacy and access to credit
- Supporting investment in farm and non-farm enterprises

9. Health & Well-being

- Promoting healthy lifestyles within farming households
- Supporting access to basic health awareness and services
- Integrating nutrition, sanitation, and hygiene practices

10. Education at Farmer Household Level

- Supporting education awareness for children in farming households
- Promoting skills development for youth in agriculture and agribusiness
- Encouraging lifelong learning and knowledge transfer within communities

Our reach.

- Farmer Empowerment: Over 200 youth and women trained in agronomy, agribusiness, and leadership.
- Environmental Conservation: Over 50,000 trees planted through climate action initiatives in 2025/2026
- Market Development: supported coffee farming groups to local markets such as DRK in the year 2025/2026.

Why Partner with us. SUCOFAM has over the years concentrated on the following;

- Farmer-Centered Approach: Strong focus on youth and women empowerment
- Market-Driven Model: Integration of production, value addition, and branded product marketing
- National Reach: Operations across Uganda supporting multiple value chains
- Holistic Development: Addresses agriculture, social inclusion, health, and education at household level
- Sustainability Focus: Climate-smart and environmentally responsible interventions
- Proven Impact: Measurable improvements in incomes, resilience, and livelihoods

Core Values.

1. Farmer-Centered Empowerment

We prioritize the empowerment of smallholder farmers, particularly women and youth, by building their capacity, strengthening leadership, and enabling meaningful participation across agricultural value chains.

2. Market-Driven Excellence

We promote quality production, value addition, and structured market access, ensuring farmers produce market-compliant products and secure fair, competitive, and sustainable incomes.

3. Inclusivity & Equity

We are committed to eliminating systemic barriers by fostering gender equality, youth inclusion, and equitable access to resources, opportunities, and decision-making platforms.

4. Sustainability & Climate Responsibility

We champion climate-smart agriculture, environmental conservation, and responsible natural resource management to ensure long-term productivity and resilience of farming systems.

5. Holistic Household Transformation

We advance integrated development by addressing not only agricultural productivity but also financial inclusion, nutrition, education, health, and overall household well-being.
